PROFESSIONAL SUMMARY

Technical Operations & Systems Analyst with an Electronics Engineering foundation (Finite State Machines, Logic Systems) and frontline Amazon logistics operations experience. Specializes in multi-node order routing, catalog schema governance, event-driven webhooks, and storefront API forensics across **Shopify Plus** and distributed **3PL Warehouse Management Systems (WMS)**. Proven track record leading Sev-1 incident triage simulations, engineering idempotent Shopify Flow automations, eliminating margin-eroding discount collisions, and authoring rigorous SOPs.

CORE TECHNICAL SKILLS

- **Platforms & Middleware:** Shopify Plus Admin, ShipBob 3PL WMS, Gorgias Helpdesk, Matrixify (Excelify), Slack Webhooks
- **Automation & Logic:** Shopify Flow (Idempotency Guards, List-Quantifiers), Gorgias HTTP Integrations, GraphQL Admin API
- **Data & Forensics:** Matrixify (`MERGE` Protocol), Python (`re` Barcode Linters), Chrome DevTools (Fetch/XHR, Payload Forensics)
- **Frameworks & Reliability:** Finite State Machines (FSM), Point-of-No-Return (PONR) State Locks, Sev-1 Incident Command, 5 Whys RCA, CAPA

TECHNICAL PROJECTS & SYSTEMS ARCHITECTURE

E-Commerce Systems Architecture & Simulation — Synapse Botanicals | 2026

Production-grade sandbox modeling multi-node logistics, event-driven webhooks, and margin protection on Shopify Plus. Portfolio.

- **Asynchronous Order Mutation & Webhook Failure (Capstone):** Modeled 15-minute 3PL polling latency during post-purchase address edits; designed a deterministic **Point-of-No-Return (PONR)** finite state machine with two-phase commit holds in Shopify Flow, eliminating simulated inventory drift and $98 customer chargebacks.
- **Multi-Node Routing & Freight Surcharge Optimization (Domain 2):** Modeled and validated a **77.2% reduction in split-shipment freight surcharges** (4.20–6.80 saved per heavy basket) across bi-coastal nodes (`LOC-NV-02` & `LOC-PA-01`) by enforcing a strict routing waterfall and isolating showroom stock as `not stocked`.
- **Zero-Loop Workflow Automation & Circuit Breaking (Domain 3):** Stress-tested workflow resiliency by simulating a 1,840-execution recursive Flow loop; rebuilt schemas with list-quantifier idempotency guards, HTTP exponential backoff retries, and automated Slack Sev-1 alerting (>50 runs/min).
- **Discount Collision Mitigation & Cart Diagnostics (Domains 4, 5 & 6):** Programmed mutual exclusivity rules across discount tiers, eliminating **100% of simulated negative-margin checkout orders**; benchmarked storefront cart friction in Chrome DevTools with **<60s MTTI**; standardized Gorgias macro HTTP action payloads.

PROFESSIONAL EXPERIENCE

Customer Service Operations Associate — Amazon Operation Services Philippines, Inc.

Cebu, Philippines | Jul 2023 – Dec 2023

- Resolved mission-critical customer escalations spanning order lifecycles, payment authorizations, carrier tracking desynchronizations, and refund triage under strict SLA benchmarks.
- Coordinated directly with Amazon Fulfillment Centers and carrier dispatch teams to release stranded parcels and correct delivery anomalies.
- Consistently surpassed operational CSAT, QA, and First-Contact Resolution (FCR) targets, securing a permanent regularization offer within 5 months.

EDUCATION

Bachelor of Science in Electronics Engineering — Cebu Institute of Technology – University

Cebu, Philippines | Expected Graduation: 2026

- **Core Systems Focus:** Systems Engineering, Finite State Machines (FSM), Logic Circuit Design, Telemetry & Discrete Signals.

CERTIFICATIONS & TECHNICAL CREDENTIALS

- **Gorgias Certified Administrator** & **Gorgias Basic Certification** — Gorgias Academy
- **Shopify Plus Platform Fundamentals & Operational Architecture** — Shopify Academy

- **Python Scripting for Data Governance & CSV Schema Validation | Incident Management & Root Cause Analysis (CAPA / 5 Whys)**
